

TSCM "Debugging" VS INSIDER THREAT

We just want to thank all Valuable Clients for their ongoing support during the past 25 Years.

The threat posed by Corporate Espionage is real and imminent. TSCM is an extremely important step towards proactively protecting Intellectual Property and Information Assets owned by organisations.

An Insider Threat is a malicious threat to an organisation that emanates from people within the organisation, such as PAs, CPOs, Enterprise Risk Managers, IT Managers, Employees, Contractors or Business Associates. This could pose a significant risk and security exposure, as these individuals could be compromised to potentially assist in planting of eavesdropping ("bugging") devices within the Business environment.
